Setting the Location of the Ask/Answer Dialogs

> ok, we have ssl, thanks; but how about a few simple
> things like setting the
> location of ask/answer. until thats done, so how
> does one do it without having
> to make one's own ask/answer critters?
>
> Thanks

Hi Andrew,

In my projects I use a frontScript like :

```
on preOpenStack
  if the short name of the target \
    is among the items of "Ask,Answer" then
    set the location of the target to the screenLoc
  end if
  pass preOpenStack
end preOpenStack
```

The above will center the Ask and Answer dialog boxes, but you could add handlers to change the loc and save it in a local variable of the frontscript. Example :

```
local sDialogLocationsA
on Andrew_SetDialogLocation pDialogName, pLocation
  put pLocation into sDialogLocationsA[pDialogName]
end Andrew_SetDialogLocation

on preOpenStack
  put the short name of the target into tName
  if tName is among the items of "Ask,Answer" then
    set the location of the target to \
      sDialogLocations[tName]
  end if
  pass preOpenStack
end preOpenStack
```
