

## **Bouncy:** **Just for Fun,** **Bouncing an Image across your Desktop**

Bouncy is a stack that bounces an image across your desktop. This Video Tutorial shows you how to use this Sample Project, and how to take it apart to understand how it works or copy portions of it for use in your own applications. We recommend that you have explored the introductory video tutorials so you have a basic understanding of how Revolution works before you start on the Sample Projects.

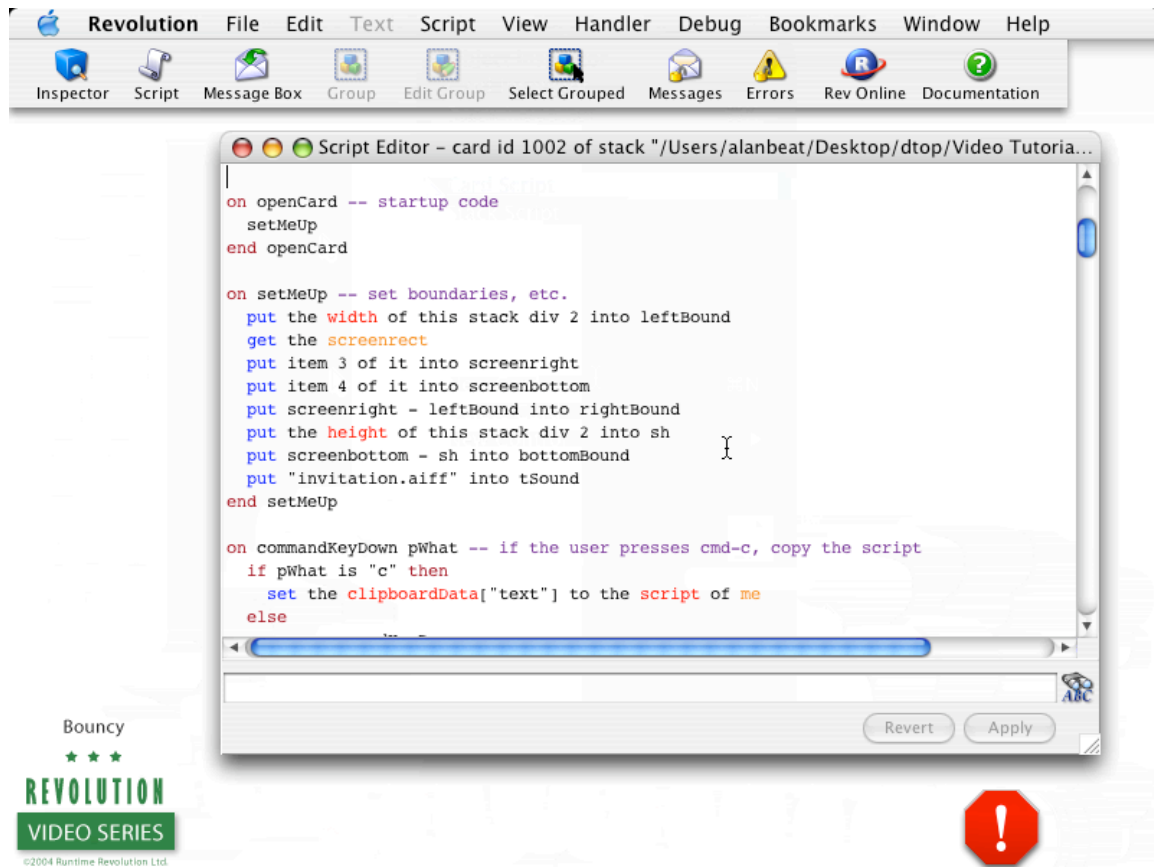

### **Key topics covered in this tutorial**

- A walk through the Bouncy application
  - How the objects in Bouncy were created
  - Understanding and editing Bouncy's scripts
-

To use bouncy simply drop it and watch the result. You can change the image that is displayed by drag-dropping a different file onto the bouncy window.

All of the scripts for bouncy are contained within the card script.

Because this is more advanced tutorial, fewer comments have been included than in the other sample projects. The logic is straightforward and this makes it easier to read through the flow of the entire script.
