

Turning Your Standalone Into a Windows Service (Windows NT/2000/XP Only)

---

> I know it's possible to write "faceless" applications with Rev... is it

> logs in), run under their own separate session, can be started and stopped,  
> and generally have no user interface]

Give FireDaemon (<http://www.firedaemon.com>) a try. With FireDaemon you can install and run any application as a windows service. I did not try it with apps created with Revolution, but with vbs scripts and small exe i created with VB.

*(Editor's Note: The FireDaemon web site indicates that it should work with any application, and even specifically references "scripting interpreted languages" like Ruby, Python, etc. so it should work fine with a Rev application.)*

Another tool similar to the above is AtYourService (<http://www.prismmicrosys.com/atyourservice/index.htm>)

And here's a description "How to create your own user-defined services unter Win NT/200x/XP", if you want to do it without the tools above:

<http://www.tacktech.com/display.cfm?ttid=197>

Best regards,

Matthias
