

Revolution Property/Group Assignment

This exercise is designed to reinforce the topics covered in lecture and to introduce you to the principles of group objects in Revolution and prepare you for the lecture on the same topic.

1. Take a copy of the stack you created for the previous assignment and change its size. Make it so that the user cannot alter the size.
2. Change the background color for the stack from the default tone.
3. With the field on the first card, change the font, style, and size. Change the size and location of the field.
4. With the three buttons of varying types on the next card, change the size and location of one, change the background color and text color of the other, change the text attributes of the third.
5. On the third card with the three graphics of varying types, change colors and other properties in obvious ways.
6. With the fourth card, change the color of the card. Then alter the text and color properties of the field and please answer the following questions:
 - A. What is a group (within the context of Revolution)?
 - B. Why group?
7. Save the stack with **YourName.rev** as its filename.

This assignment is due by the beginning of class on the due date specified in the [class schedule](#). Turn in your completed assignment by dragging a copy of the stack from your data disk into the **Assignment Drop** folder in the **CHum 281** folder on the CHum 281 server (hummac.byu.edu) as explained [before](#).
