Viewing PDF Files

[X](#) (Mac OS X Only)

One of the posts to the SuperCard list mentioned a neat feature using QT under OS X: you can load PDF files inside of a Player object and then (assuming you have the controller showing) page through the PDF using the controller (or you can do so using a 'set the currentTime' script). Resizing the Player object resizes the PDF, and it renders beautifully.

Unfortunately it's not supported on Windows... dash it all... but for OS X implementations, it's a really cool feature.
