

Disable Window Resizing

Now that the controls in the UI of the video window are in the proper position it is time to fix the window size so the user cannot resize it.

Resize Window

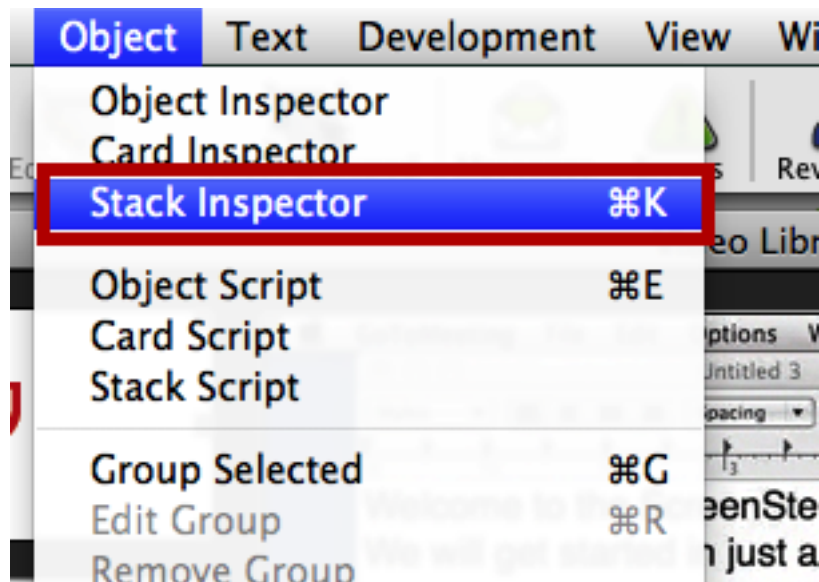

Resize the stack window by dragging the resize handle on OS X (or the edge of the window on Windows).

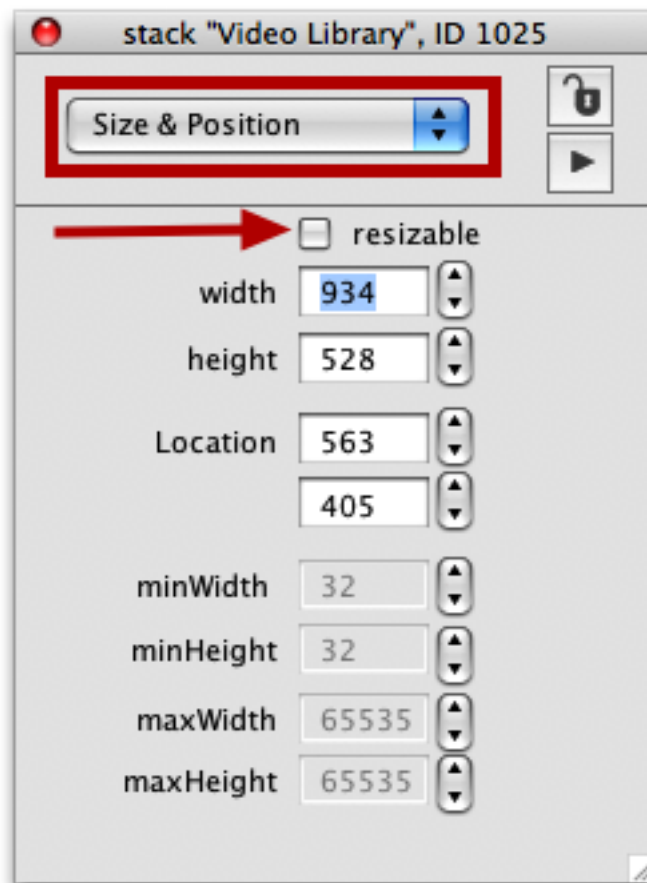

Here you can see that the bottom border of the window is the same size as the left and right borders

Open Stack Inspector

Now open the **Stack Inspector** by selecting the **Object > Stack Inspector** menu item.

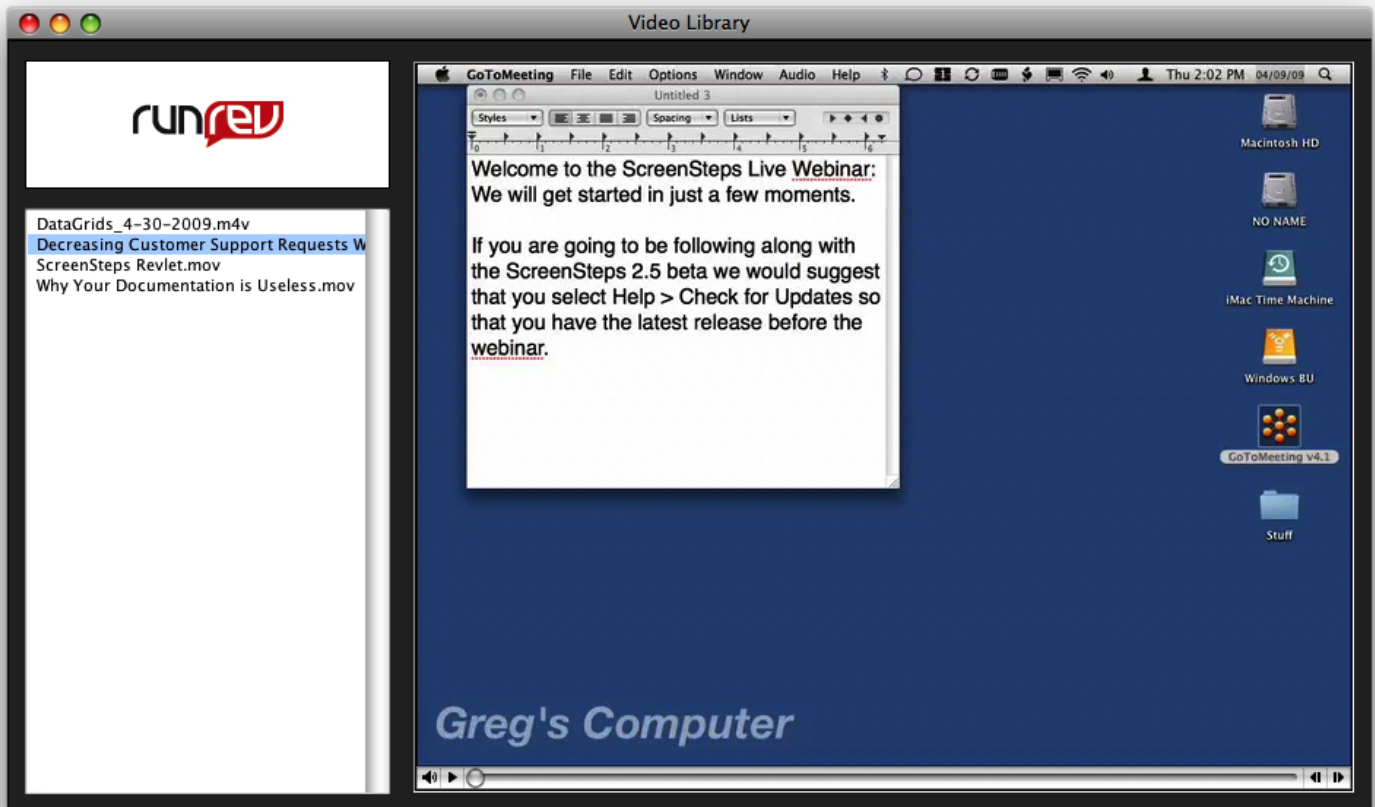

Turn Off Resizable

Switch to the **Size & Position** pane in the inspector and uncheck the **Resizable** property. The window will no longer be able to be resized.

Note: You can also fine-tune the size of your stack window using this pane.

The Result

Now the stack window can no longer be resized.
