Determining if an Application is Running From a Local or Network Drive

> I'm trying to figure out a method of checking whether the currently
> running standalone app developed in Rev is running from a local or
> network drive. I want to be able to licence my software separately
> for local vs network use.
> Anyone got any suggestions for both Mac and Windows?

Not both, but one: on the Mac, you can use AppleScript to ask the Finder to
inspect the "local volume" attribute, eg

```
    tell application "Finder"
      get the local volume of disk "Macintosh HD"
    end tell
```
